<u>Warranty</u>	.....	39

## 1.0 Introduction

- 1.1 To obtain optimum benefit from your fuel bowser unit, it is recommended that all personnel operating it read and understand this manual prior to operation.
- 1.2 Upon receipt of the bower unit, a visual inspection should be made to determine that it is complete and has not sustained any damage during transportation.

## 2.0 Safety

### 2.1 Potential Fire and Explosion

- 2.1.1 Due to the nature of fuel, care should be exercised to eliminate all sparks and open flame in the area of the bowser unit.
- 2.1.2 A 50-foot radius area around the bowser unit for no smoking, sparks or open flames is usually a good practice. It is strongly recommended all local or other regulations be consulted for further restrictions.

**CAUTION:** The fuel bowser should never be used inside of an enclosed area. Proper ventilation is required at all times.

### 2.2 Telescoping Drain

- 2.2.1 Care should be exercised in using the telescoping assembly to prevent injuring fingers between clamps by dropping sections.

### 2.3 Grounding

- 2.3.1 To eliminate static sparks; the fuel bowser unit is equipped with two (2)-grounding reels. Connect prior to draining or filling operations as described in the "Operations Section".

### 2.4 Towing

- 2.4.1 Make sure the tow bar is securely attached to the towing vehicle.
- 2.4.2 Maximum allowable towing speed is 15 MPH.

### 2.5 Tow Bar Actuated Parking Brake

- 2.5.1 Parking brake must be applied when filling and draining or when left unattended.

### 2.6 Air Supply

- 2.6.1 **CAUTION:** Check the air pressure of supply lines to the vacuum generator to assure it is not in excess of 100 PSI.

## 2.0 Safety (Continued)

### 2.7 Inspections

- 2.7.1 Inspections of tires, undercarriage, tow bar, vent, valves, hoses, sight gauge, reflectors, safety labels, etc., should be inspected on a periodic basis. It is recommended these inspections be performed weekly.
- 2.7.2 Internal inspection will be necessary to insure structural integrity and cleanliness. It is recommended that interval inspections be performed at least every six- (6) months.

**CAUTION:** When entering confined spaces such as the interior of the bowser tank, care should be taken to provide proper breathing equipment and a separate person dedicated solely to a safety watch of the person inside. It is strongly recommended that all local or other regulations be consulted.

### 2.8 20" Manway

- 2.8.1 Insure the manway cover is provided with a "lock out" devised to prevent accidental closing of the manway while doing internal inspections and to prevent unwanted elements from being introduced to the fuel supply.

### 2.9 Hoses

- 2.9.1 Inspect hoses daily prior to usage. The hoses should be extended, as it normally would be for operating. Check for evidence of blistering, carcass saturation or separation, cuts, nicks or abrasions that expose reinforcement materials. Look for slippage, misalignments or leaks at the couplings; if coupling slippage or leaks are found the cause of the problem shall be determined. All defective hoses should be removed from service.

### 2.10 Fire Extinguisher

- 2.10.1 Mounted on each side of the bowser is one 20-lb. Purple K fire extinguisher meeting U/L 30B:C and NFPA 407 specifications.
- 2.10.2 Inspect the fire extinguisher before each use of the fuel bowser. Insure fill condition is fully charged and no visible damages are evident.
- 2.10.3 If damages or charging is required follow manufacturer recommendations or replace as needed.

### 3.0 Operations

- 3.1 Intended Use
  - 3.1.1 The fuel bowser unit is intended for use in draining and collection of fuel from aircraft or storage area and then transportation to the storage area or disposal site. Any other use is prohibited and may void any and all warranties.
  
- 3.2 Tow Bar and Undercarriage
  - 3.2.1 The fuel bowser unit is equipped with steering front wheels controlled by the tow bar.
  - 3.2.2 Care should be taken not to jackknife the bowser when backing up.
  - 3.2.3 Tire inflation should be checked and maintained as described in the "Maintenance Section".
  - 3.2.4 Before towing, check to see that the grounding reel, air lines and hoses are disconnected, and valves are closed, tow bar is securely attached to the towing vehicle and all manway and covers are closed and latched.
  - 3.2.5 The fuel bowser unit is equipped with a tow bar latch to hold it in the upright position.
  
- 3.3 Tow Bar Actuated Parking Brake
  - 3.3.1 The fuel bowser unit is equipped with a mechanical lever operated parking brake. The brake is applied when the tow bar is in the upright vertical position. The brake should be applied when filling, draining tank or whenever the bowser is left unattended.
  
- 3.4 20" Manway
  - 3.4.1 The fuel bowser unit is equipped with a 20" quick opening manway assembly for internal inspections.
  - 3.4.2 The manway is equipped with a flip locking cross arm assembly to ensure sealing and securing the cover lid in place.
  
- 3.5 Grounding
  - 3.5.1 The fuel bowser unit is supplied with two (2)-grounding reels.

### 3.0 Operations (continued)

#### 3.5 Grounding (Continued)

- 3.5.2 Before filling or draining, the grounding reels must be attached between the aircraft or object being serviced and an appropriate ground.

#### 3.6 Drain Valve

- 3.6.1 The fuel bowser unit is equipped with a 1-1/2" NPT ball valve with a cam lock connector.

### 3.7

#### Telescoping Drain Assembly

- 3.7.1 The fuel bowser is equipped with a telescoping drain assembly. It is capable of being adjusted to 16ft-0in high.
- 3.7.2 To Raise:
- (1) Loosen top clamp if necessary.
  - (2) Grasp top section with one hand and lift as required.
  - (3) Tighten clamp securely with the other hand.
  - (4) Reposition lifting hand by grasping tube below tightened clamp and lift as required.
  - (5) Repeat steps 1-4 until desired height is obtained or assembly is fully extended.
- 3.7.3 To Lower:
- (1) Tightly grasp bottom extended tube, with one hand loosen the securing clamp.
  - (2) Slowly lower tube hand over hand, until the following clamp is resting on the loosened clamp.
  - (3) Repeat steps 1 and 2 until all sections are lowered.
- 3.7.4 Funnel is equipped with a nitrile rubber seal around the top edge to allow placement against the underside of the wing.
- 3.7.5 When not in use, telescoping funnel should be collapsed and the cover closed to eliminate contamination.

#### 3.8 Telescoping Drain Sump

- 3.8.1 The fuel bowser unit is equipped with a sump with a removable bottom to allow service and cleaning.

### 3.0 Operations (Continued)

#### 3.9 Vacuum Assembly

- 3.9.1 This assembly is equipped with an air powered vacuum generator.
- 3.9.2 It is intended for vacuum draining or depuddling fuel and condensation. Caution! If other objects such as rock or metallic pieces are vacuumed into the vacuum chamber, they may create a hazard due to sparking.
- 3.9.3 Vacuum is started by attaching a recommended air supply of 60 CFM at 100 PSI and turning on the air supply valve.
- 3.9.4 The vacuum assembly is supplied with 50 feet of vacuum hose and a ball valve on the vacuum suction outlet.
- 3.9.5 The vacuum assembly is equipped with (4) four each ½" NPT opening for use with pencil drains. To use, the pipe caps must be removed and self-closing quick disconnects attached that match local standards. To operate, close vacuum suction valve and turn air supply on and connect drain lines.
- 3.9.6 The vacuum chamber is equipped with an automatic drain valve that opens whenever vacuum is eliminated in the chamber. This valve opens directly into the main tank.
- 3.9.7 The vacuum generator is equipped with an automatic overflow protector. When the level of product reach full, the valve shuts off and eliminates the vacuum. The vacuum chamber will then automatically drain. The air supply must be shut off to reset the overflow valve. Vacuum may then continue.

#### 3.10 Vent Overflow Protector

- 3.10.1 The bowser unit is equipped with a float-actuated seal to prevent fuel from flowing out the vent in the event the bowser is overfilled.

## 4.0 Maintenance

### 4.1 Tow Bar and Under Carriage

- 4.1.1 The fuel bowser unit is equipped with steering front wheels, controlled by the tow bar and fixed rear wheels.
- 4.1.2 Maintenance should consist of the following:
  - 1) Kingpin bushing, turning bushings and tie rod ends are self-lubricating and need no additional maintenance.
  - 2) Inspect wheel bearings at three (3) month intervals. Repack and/ or replace as needed.
  - 3) Check tire pressure weekly. Maintain pressure as per tire markings.
- 4.1.3 Tow bar pivot pin and hook ring should be inspected monthly for excessive wear or cracks.

### 4.2 Tow Bar Actuated Parking Brake

- 4.2.1 The fuel bowser unit is equipped with a parking brake assembly consisting of a 7" diameter brake drum with 1 ¾" wide brake shoes.
- 4.2.2 The shoes are activated via a mechanical linkage, eccentric and lever.
- 4.2.3 The brakes are applied when the tow bar is in the upright vertical condition. The brakes release when the tow bar is lowered via mechanical spring return.
- 4.2.3 Adjustment may be necessary as the shoes wear.
  - 1) Tightening is accomplished by removing the bolt through one yoke and screwing the yoke to shorten/ lengthen the connecting rod as required.
  - 2) Do not over tighten or brakes may drag when released.
- 4.2.4 Brake Shoe Replacement
  - 1) Remove wheel.
  - 2) Remove nut retaining hub and drum assembly.
  - 3) Disconnect actuating rod.
  - 4) Remove shoe retainers.
  - 5) Install new shoes.
  - 6) Replace shoe retainers.
  - 7) Adjust actuator rod length.
  - 8) Replace wheel.

## 4.0 Maintenance (continued)

- 4.3 20" Manway
  - 4.3.1 Inspect manway gasket weekly for cuts, cracks or galling. Replace as needed.
  
- 4.4 Sight Gauge Assembly
  - 4.4.1 The sight gauge should be inspected monthly for loose connections and weathering of clear tubing. Replace as required.
  
- 4.5 Grounding
  - 4.5.1 Grounding reel cables should be pulled out, cleaned and inspected monthly.
  
  - 4.5.2 Cable clamps and ends should be inspected for loose connections monthly.
  
- 4.6 Telescoping Drain Assembly
  - 4.6.1 The telescoping drain assembly consists of a 4 ½" stainless steel housing permanently attached to the tank and (5) five aluminum tube sections.
  
  - 4.6.2 The stainless tube and four (4) largest aluminum sections are equipped with a clamp assembly.
  
  - 4.6.3 Each aluminum section is crimped on the lower end of the tubing, which acts as a stop to prevent the tube from sliding through the clamp.
  
  - 4.6.4 Disassembling of the funnel sections are accomplished by rotating the three (3) sections 180 degrees from normal position and gently lifting each section so that the crimped edge on the tube is aliend with the slot on the clamp.
  
- 4.7 Telescoping Drain Sump
  - 4.7.1 The fuel bowser is provided with a sump assembly located directly under the telescoping assembly.
  
  - 4.7.2 Drain the bowser and the sump prior to service and inspection.
  
  - 4.7.3 Maintenance should consist of inspection and cleaning monthly.

## 4.0 Maintenance (Continued)

### 4.8 Vacuum Assembly

- 4.8.1 The vacuum assembly consists of a vacuum chamber with an air powered vacuum generator mounted on a removable cover. The cover is held in place by three (3) latches.
- 4.8.2 The vacuum cover is equipped with an overflow valve which should require no maintenance.
- 4.8.3 The vacuum generator is attached to the chamber cover. The generator is equipped with an exhaust silencer which should be cleaned at six (6) month intervals or more often depending on the amount of use and conditions.
- 4.8.4 The vacuum hose should be inspected monthly for cracks. Any sudden loss of vacuum suction power may indicate a crack in the vacuum hose.
- 4.8.5 The cover gasket should be inspected monthly for deterioration. This gasket should be pliable and free from weather checking.
- 4.8.6 The overflow stop pivot bolt should not be over tightened. Over tightening will restrict motion of the float.

### 4.9 Vent Overflow Preventer

- 4.9.1 The Vent Overflow Preventer is located inside the tank directly under the vent.
- 4.9.2 It consists of a caged float with an elastomer seal.

### 4.10 Fire Extinguisher

- 4.10.1 Recharge in accordance with local codes and manufacture recommendations.

## 4.12 Trouble Shooting

### Trouble Shooting

<u>SYMPTOM</u>	<u>PROBABLE CAUSE</u>	<u>PROBABLE CORRECTIONS</u>
Bowser does not track or steer	Bent king pin housing	Replace king pin housing see section 5.2.1 Item #7
	Defective tie rod end	Replace tie rod end See section 5.2.1 Item #12
	Loose or worn out bushings	Replace as needed see section 5.2.1 item #11 #16 or #18
Tow bar does not stay in the up-right position	Broken or stretched spring	Replace as needed see section 5.2.1 item #26
Parking brake does not work	Need adjustment or repairing	Adjust or replace as per instructions. See section 4.2 and 5.2.3-B

## 5.0 Replacement Parts

This section provides information for identification of parts for ordering. To Order, it is important to have the Model Number, Subassembly Number, Part Number and Description. Parts may be ordered by calling or writing to:

## 400 GALLON FUEL BOWSER ONE YEAR LIMITED WARRANTY

Seller warrants its "400 Gallon Fuel Bowser" to be free from defects in material and workmanship under the normal use and service for which the unit is intended. If, but only if the unit has been properly operated, maintained and stored in accordance with printed directions contained in the product manual. Our obligation under this warranty shall be limited to the repair or exchange of equipment and parts which may prove defective within one year of the date the unit is put into service but shall in no event extend beyond a date two years from the date the unit is shipped from our plant. All transportation charges on parts returned to us for replacement under this warranty must be returned pre-paid.

This warranty does not extend to damages caused by environmental factors varying from normal design conditions, whether natural or man-made, or to units subjected to misuse, negligence or accident. This warranty likewise does not extend to the unit or any parts thereof which have been repaired or altered improperly or in any way so as to effect adversely its stability or reliability. This warranty does not cover parts or labor required to repair or replace parts whose usefulness is exhausted due to normal operation of this unit.

THIS WARRANTY IS EXPRESSLY IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE NOT SET FORTH IN A WRITING SIGNED BY AN AUTHORIZED REPRESENTATIVE OR SELLER. SELLER SHALL IN NO EVENT BE LIABLE FOR ANY CONSEQUENTIAL LOSS OR DAMAGE RESULTING FROM THE USE OR LOSS OF USE OF THIS UNIT.
